

Business Analysis Training

Anyone interested in a broad overview of key tasks conducted by a business analyst or needing to know how to effectively analyze business options and outcomes.

We provide a cohesive learning experience that takes the extremely complex elements of business analysis and simplifies them into manageable learning components. All of our courses include hands-on workshops giving students many opportunities to experience the techniques in class. Our curriculum is developed utilizing Certified Business Analyst (CBAP) as well as education specialists. This brings together the knowledge of best practices and techniques, with the emphasis on education and professional learning.

World Class Infrastructure

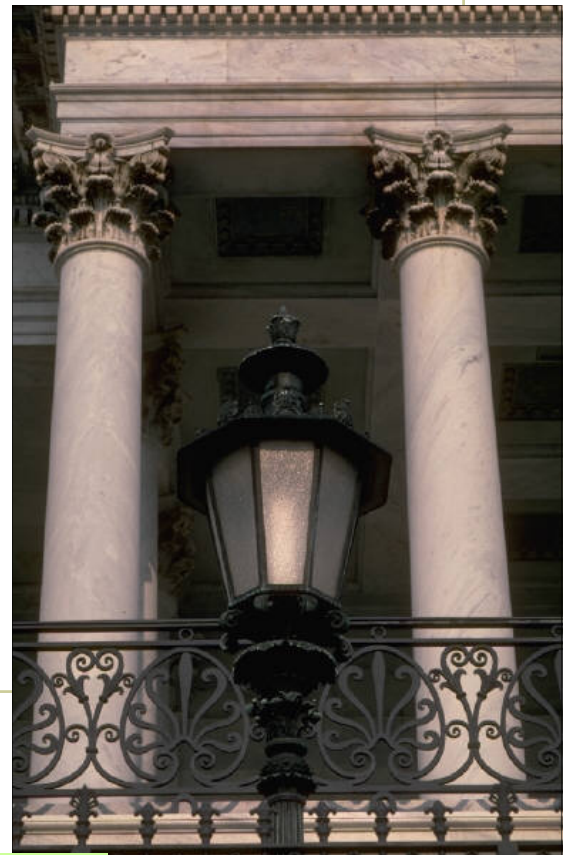

Business analysis is a critical process that drives the project life cycle. The business analyst, acting as an intermediary between the business and technical communities, analyzes competing business needs and develops plans to implement the projects that support stakeholder objectives. In this course, you gain foundational knowledge of the role and function of the business analyst. You also learn to apply a clearly defined business analysis framework.

You Will Learn How To

- Apply a solid business analysis framework
- Perform key functions of the business analyst
- Evaluate and prioritize the feasibility of various business initiatives
- Plan a detailed requirements development process using best practices
- Deliver the requirements package and support downstream development
